

K-Max

We have extensively researched and surveyed the distinct needs and concerns of the K-9 officer and our findings have concluded that most K-9 vests are heavy, cumbersome, excessive in size, and difficult to suit quickly. Officers also expressed that a tracking harness cannot be worn effectively with a standard K-9 vest making handling during track work and apprehension a serious obstacle. The majority of officers also expressed that standard vests excessively generate and retain body heat making the vest difficult to be worn for an extended period of time.

K-Max™ Design Improvements Include:

- Lighter weight
- Increased maneuverability
- Built-in guides for tracking harness (universal design will fit most popular harnesses on the market today)
- Decreased heat retention
- Full tour of duty comfort
- Removable spinal plate for tactical situations
- Split collar for full range of motion during tracking

The newly designed ballistic vest covers the vital organs of the canine, giving it protection from life threatening wounds as a result of gunfire. By only covering the vital organs, the K-Max™ design allows for full range of motion and comfort giving the canine enough flexibility to be agile and unrestricted while affording it the protection it deserves.

The new design of K-Max™ armor offers the canine breathability and minimizes heat retention. The carrier has been designed to allow an easy two-step on or off process.

Protective Products new "K-Max™" canine design gives canine officers incomparable protection and mobility and inspires confidence in the K-9 handlers.
