Handheld Device

The Option™ handheld device, is a belt holstered Oleoresin Capsicum (OC) dispenser, unlike any existing. It provides a omni-directional, pinpoint accurate stream to a distance of 15 feet. The streamline shape and ergonomic design creates a simple, concealable and reliable system to effectively deploy OC. The device is equipped with a lanyard allowing the user to attach it to their wrist, thus providing the user with the opportunity to go hands-on, yet maintain control of the Option. It enhances the user's safety as it is ideal for deploying with a handgun in a dual-force concept.

Pistol & Shoulder Mounted

The Option™ is a pistol or shoulder mounted Oleoresin Capsicum (OC) dispenser, unlike any existing. It provides for a omni-directional and accurate stream to a distance of 15 feet. In conjunction with a firearm, it creates a single weapons system, providing for delivering OC in ambiguous or unplanned encounters. It enhances the user's safety and reduces the potential liability by giving the user the immediate option or choice to transition from less lethal force to lethal force and back again as necessary without delay.

Configuration:

All of the Option™ Safety Devices are made of light weight durable, fiber plastic. The devices are ergonomic in design and impervious to bore cleaners and other common gun cleaning solvents. They will not need to be removed from the weapon during cleaning. They are impact resistant and have successfully been drop tested to ten feet. They utilize micro canisters that allow for the devices to be re-used. The canisters are water (for training application) or OC filled.
